Office Action Summary	Application No. 10/534,865	Applicant(s) RAZIAN, HASSAN	
	Examiner ANN SCHILLINGER	Art Unit 3774	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bolger et al. (US Pat. No. 6,770,096) in view of Vives et al. (US Pat. No. 4,711,234). Bolger et al. discloses the following of the claimed invention: a block (1); anchor members (3) with a pivot (2) and blades (10, 11); means for mounting the pivot comprising a hole (opening on element 5), a slot (opening on element 5'), and a common cavity portion (4); the anchor members having a first position (please see Figure 4) and a second position (please see Figure 5). The means for turning the pivot/bearing include the bar of element 2, located on the right side of Figure 2. Please see the figures below for the rest of the claimed features of the invention.

Bolger et al. discloses the invention substantially as claimed, however, Bolger et al. does not teach the second bearing as a cylindrical retention bearing. Vives et al. teaches a

biocompatible cylindrical retention bearing in the abstract for the purpose of securely holding its associated mobile member in place. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Bolger et al. by using a cylindrical retention bearing in order to securely hold the anchor members in a particular position.

Allowable Subject Matter

Claims 6 and 7 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 2-4 have been considered but are moot in view of the new ground(s) of rejection.
